Recommended System Configurations for TallyPrime

To install TallyPrime, you require administrator rights (Create, Write, Update, Modify, and Delete permissions). If you are using multilingual features, ensure that the operating system supports multiple languages.

The hardware and software requirements for a Client-Server system and a standalone computer are provided below. This is valid for both TallyPrime Silver and Gold Editions.

Particulars	Recommended Configuration
Processor	1.8 GHz 64-bit (x64) architecture processor; Core2 Duo, Dual Core, Core i3, Core i5, Core i7 equivalent, or above
RAM	4 GB or more
Hard Disk	150 MB free space to install the application (This excludes the space required to store company data.)
Monitor Resolution	1366 × 768
Operating System	64-bit editions of Microsoft Windows 7, Windows Server 2008 R2, or above, including Windows 11
Other MS Office software	64-bit editions of MS Office software such as Excel, Word, and so on

Once you have setup your computer, for information on using TallyPrime, refer to How to Start Using TallyPrime.
